

SUITABLE FOR:

“ Single step, self-weeding paper that will only transfer the toner ”

stepone •• Print your image with a Laser Printer

- Mirror your image or artwork
- Run the transfer paper on a heavy paper mode (175gsm+) such as “transparency” or “label” mode - This will slow down the paper in the machine allowing more time for the toner to adhere completely.
- Run 2-3 sheets of blank paper through your printer to warm up the fuser to operating temperature
- Single-sheet feed paper into the printer/copier with the short side first (grain long). Using a by-pass tray or printing on duplex mode may help with feeding.
- Print the image on the blank side of the transfer paper (not the side with text)

yolo recommends...

Choosing a garment with a tight weave and an image with intense colours (more than 50% saturation and not pastels, tints or photographs).

steptwo •• Transfer your image with a Heat Press

Application to cotton or poly blend fabrics:

- Prepare the heat press at **165°C**
- Press the fabric first to remove any moisture
- Place the heat transfer with the image facing down in the desired position on the fabric
- Apply heavy pressure for **25-30 seconds**
- You must remove the backing paper after approximately 5 seconds and within 10 seconds of removing the fabric from the heat source - you can leave the garment on the heat press to give you a little more time (as it won't cool so quickly). Peel at a sharp angle and in one slow but smooth movement for a clean image reveal.

yolo recommends...

Pressing again for 25 seconds after peeling with Teflon or silicone parchment paper. This will increase washability and durability. Pressing with Teflon will deliver a shinier finish.

stepthree •• Wash and care instructions

- Leave finished item for at least 24 hours before washing
- Machine wash separately, inside out in cold water
- Dry at low heat settings
- Do not dry clean, use bleach or iron over the transfer

yolo recommends...

Storing your transfer paper in a cool, dry place and sealing the packaging between uses.

100% Money Back Guarantee

We test all products thoroughly on various substrates, using different transfer equipment. As it is impossible to replicate all possible variations, it is essential that you test this transfer paper using your equipment, methods and substrate material prior to production. Heat presses vary in accuracy so you should conduct tests to determine the best time and temperature for your equipment. The Seller's and Manufacturer's maximum obligation is to replace any paper that has proven to be defective. Neither the Seller nor the Manufacturer shall be liable for any injury, direct or consequential, arising out of the use of, or inability to use this paper.
