

1

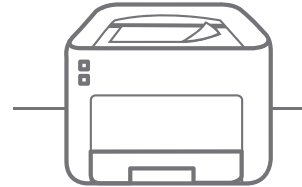

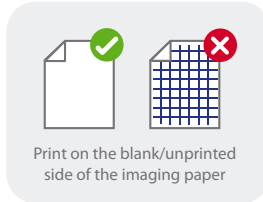

Mirror your image or artwork and print in the same solid colour as your substrate and ensuring the colour is intense (printing dark blue is best for black fabrics)

2

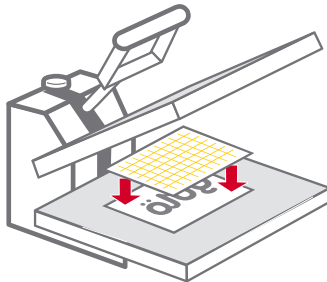

Run a few sheets of blank paper through the printer to warm it up to operating temperature. Select normal print quality and gradually increase the paper weight setting until the toner fuses well and the image does not smudge*. Print one sheet at a time on the blank side of the **blue** imaging paper using a bypass tray if possible

*You may have to use a slow paper setting e.g. heavy paper, transparency or label mode. If in doubt, consult your printer manufacturer.

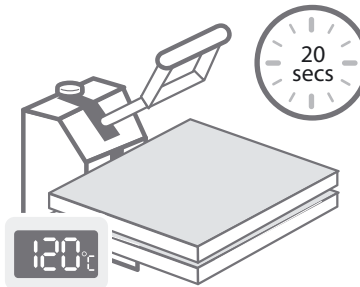

3

Place the **yellow** transfer sheet on top of the image (use a foam pad to ensure even pressure)

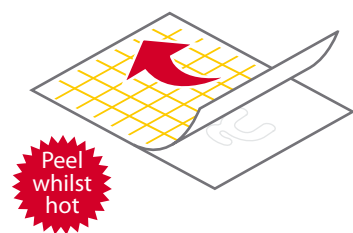

4

Press at **120°C / 250°F** with **medium** pressure for **20 seconds**

5

Peel the papers apart with a smooth and even motion (this will apply a white transfer coating to the image*)

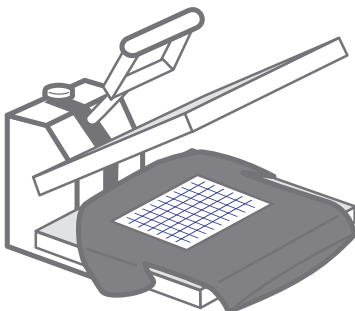

Peel whilst hot

*If white edges occur, try decreasing the pressure.

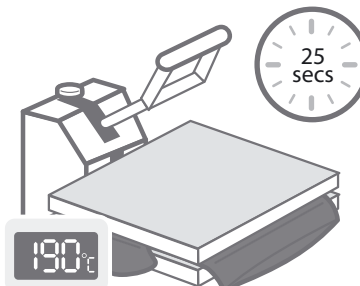

6

Place the image face down on substrate

7

Press at **190°C / 375°F** with **heavy** pressure for **25 seconds**

8

Peel when cold

24hrs before washing

wash and care instructions

Machine wash separately

Dry at low heat setting

Do not dry clean, bleach or directly iron transfer
