

## Laser Printing Tips

Run a few sheets of blank paper through your printer to warm it up and select normal print/image quality. Starting with a normal or plain paper setting, print one sheet of transfer paper at a time using a bypass tray if possible. **Gradually** increase the paper weight setting\* until the toner fuses well and the image does not smudge.

\*Transfer paper will usually print better on a slower paper setting e.g. heavy paper, transparency or label mode. Always start with a normal paper setting and increase the paper weight setting gradually as using a heavier/slower paper than necessary may increase the chance of jamming.
